Description:

Review

"M.Z. has out done herself again. Just in time for the start of my Christmas card making marathon, I now have a very unique element to use. Who'd of thunk..... I am now looking at paint chips as an additional must have item for my crafting supplies. Wonderful book and resource! If you are a crafter, a must have for jump starting the mojo! " ~ **Jana**

"This to me is where it's at in so many ways. Here is someone taking the old and making it new.

*Recycling. Creativity. Well written, formatted, put together, and then on top of that the author added photos and things and it all meshes. I can't wait to not only get started on this art, but to get my kids in on the action. Thanks a lot for deciding to put this out there, and I wish you nothing but the best in all your artistic endeavors. May you reach millions of people's lives! " ~ **James***

*"I can't wait to try these. I never worked with paint chips before so I am looking forward to it. The author does a great job of explaining step by step how to complete each project. Each project also includes a video to show you how to do it. Excellent resource." ~ **Vanessa***

*"You could not ask for a more well thought-out instruction manual. The author has taken pains to explain the process and art of making upcycled cards - you'll be grateful for the author's effort as the book makes card making easy. You will be treated to photos and videos so you can replicate the designs. By the way, the cards are pretty and there are many designs for different occasions. " ~ **Mia***

From the Author I have always delighted in creating treasures out of trash. When I was younger I made entire towns out of a wide variety and assortment of boxes. Medicine boxes, chocolate boxes, big ones, small ones and those that come in between!

My love for crafting has only grown with time and so has my love of upcycling (I finally know that is what I had been doing all that while).

The tools and equipment that is available for crafters these days is amazing to say the least. The die-cutting and embossing machines especially are a marvel. There is so much that can be done with a cuttlebug, a big shot or any other die-cutting machine. You can save soda cans from going into landfills and turn them into a valuable crafting material or you could turn paint chips into beautiful cards. So come, join us and Make a Card!

That is what this book will focus on. We will be using some simple techniques, some that use die-cutting machines and others that don't, to turn paint chips into handmade cards.

Come along for the ride as we embark on an upcycling journey and through pictures and videos, make a card awesome!

This book contains 17 different card making projects that cover everything from birthday cards to valentines day cards to thank you cards and lots else. This manual will truly help you to make a card, even if you've never made one before

Each project is illustrated with pictures and has an accompanying video for visual learners. This is one in a series of books that I have written on green crafting techniques. If you like this one be sure to check out the rest!

We really hope you enjoy this adventure with us!
